### Research and Publication: A Researcher's Guide

报告人: Prof. **Mohamed I. Dessouky**

Editor-in-Chief of *Computers & Industrial Engineering*

Research Professor, University of Southern California

#### 报告简介:

In this presentation we analyze the process of conducting scientific research, from the birth of an idea to the conclusion of the study and its publication in a peer-reviewed scientific journal. We discuss the definition of the problem, searching for relevant literature, building a model of the problem, conducting experimentation, analyzing the data, testing the model and reaching conclusions. We focus on means of documenting the research and submitting it for publication, alerting the author of pitfalls that threaten this process. We also guide the authors to sources of information which are useful in this regard.
